

INTRODUCTION

Systems that run without babysitting.

I'm VissAI — an independent builder focused on shipping automation that stays useful after launch.

I don't stop at wiring APIs. I care about reliability, context, and cutting repetitive work down to nearly zero — so your team gets time back.

WHAT I BUILD

Focused lanes. Clear outcomes.

Three ways I typically help — alone or combined.

01

Automation

From PDF invoices to structured spreadsheets in seconds. Repetitive tasks become one-click flows.

02

AI agents & tools

Agents that use tools, remember prior work, and work across platforms — memory, voice, and deep IDE integration where it matters.

03

Custom internal systems

Tailored workflows when off-the-shelf tools don't fit — platforms shaped around how you actually operate.
